ABSTRACT OF THE DISCLOSURE

POSTING SERVER, SENDING TERMINAL, POSTING SERVER CONTROL METHOD, AND SENDING TERMINAL CONTROL METHOD

Prior to delivery of content data, SIP servers 104 and 106 mediate establishment of sessions between a posting server 102 and printing terminals 108P and 110P via a network 14 according to a signaling protocol SIP. On establishment of the sessions, the posting server 102 delivers the content data to the printing terminals 108P and 110P according to a data transfer protocol HTTP. This arrangement enables low-cost and high-quality delivery of print contents.
