CLAIMS

What is claimed is:

1. A nutritional composition for use in reducing the time for tolerance acquisition in a pediatric subject having allergies to cow's milk, the nutritional composition comprising:

a. up to 7 g/100 kcal of a protein source, wherein the protein source comprises one or more non-dairy proteins;

b. 1×10^4 to 1.5×10^{12} cfu of *Lactobacillus rhamnosus GG* per 100 kcal;

c. between 5 g and 25 g/100 kcal of a carbohydrate source;

d. up to 7 g/100 kcal of a fat or lipid source; and

e. at least 5 mg/100 kcal of a long chain polyunsaturated fatty acid.

2. The method of claim 1, wherein the protein source is present at 1 g/100 kcal to 5 g/100 kcal.

3. The method of claim 1, wherein the protein source comprises a plant protein.

4. The method of claim 3, wherein the protein source comprises soy, pea, rice, potato, almond, amaranth, quinoa, or coconut protein, or combinations thereof.

5. The method of claim 4, wherein one or more of the proteins is partially hydrolyzed or extensively hydrolyzed.

6. The method of claim 1, wherein the probiotic is present at 1×10^6 to 1×10^9 cfu of probiotic(s) per 100 kcal.

7. The method of claim 1, wherein the long chain polyunsaturated fatty acid comprises docosahexaenoic acid.

8. The method of claim 1, wherein the fat or lipid source comprises polar lipids which are present at a level of 10 mg/100 kcal to 350 mg/ 100 kcal.

9. The method of claim 1, wherein the nutritional composition is an infant formula or a growing up milk.
