

ABSTRACT

A photochromic curable composition obtained by adding
5 (E) an α -methylstyrene dimer and (F) a photochromic compound
to polymerizable monomers comprising (A) a compound having
at least one epoxy group in the molecule, such as glycidyl
methacrylate or the like, (B) a polypropylene glycol
di(meth)acrylate monomer, (C) a polyethylene glycol
10 di(meth)acrylate monomer and (D) a (meth)acrylate monomer
and/or a styryl monomer. This composition is superior in
moldability when cured and gives a cured product of excellent
durability in photochromism.
