Abstract

The invention relates to a ventilated filter cigarette with a wrapped one-part tobacco strand (11) and with a filter (20) having a ventilation means, said filter consisting of at least two filter parts (22,23). Ventilation holes (14) are provided in the area of the mouth side filter part (22). Moreover, the mouth side filter part (22) is formed of a one-part filter segment, whereas the strand side filter part (23) is a filter segment (23) with a core (24) and a sleeve (26), and thus forms a so-called coaxial filter part or a coaxial filter.
