[ABSTRACT]

A congestion information display system ~~has~~includes: a storage unit ~~that~~ configured to store~~s~~ a prediction model ~~that can~~which enables prediction of ~~the~~ a congestion ~~condition~~ status of a facility; a prediction unit ~~that~~ configured to predict~~s, based on the prediction model, the~~ a time ~~at which~~ when the congestion ~~condition~~ status of the facility is ~~changes~~ changed from a first congestion ~~condition~~ status to a second congestion ~~condition~~status, based on the prediction model; and a display processing unit ~~that~~ configured to display~~s~~, on a display device, prediction information indicating that the congestion ~~condition~~ status ~~will~~ is changed at the time predicted by the prediction unit.
