SURFACE TREATMENT APPARATUS AND SURFACE TREATMENT METHOD

ABSTRACT

The present invention provides a surface treatment apparatus and a surface treatment method that can improve quality of a surface treatment upon subjecting a workpiece to the surface treatment.

A surface treatment apparatus for subjecting a workpiece immersed at least partly in a solution to a surface treatment has: a spray nozzle facing the workpiece for spraying a treatment solution towards a working surface of the workpiece. The surface treatment apparatus has at least one of: a spray nozzle rotator to rotate the spray nozzle in a plane parallel to the working surface of the workpiece; or a workpiece rotator to rotate the workpiece in a plane perpendicular to a spraying direction of the treatment solution sprayed from the spray nozzle.
