THE CLAIMS:

1. A jewellery keeper, wearable by a person, for securely holding jewellery items, the jewellery keeper including:

a keeper body including at least two moveable parts rotatably movable between an open and a closed state, a first keeper body part including moveable spaced apart arms, and a generally cylindrical second keeper body part adapted to rotatably fit therewithin, which together form a jewellery cage in the closed state, and are able to receive the jewellery items in the open state;

a substantially cylindrical wear means location on the generally cylindrical second keeper body part and within the keeper body, adapted to receive one or more jewellery item thereon, looped around the cylindrical wear means of the cylindrical second keeper body part, when the jewellery cage is in the open state, and the wear means location including a suitable soft material so that contact by the jewellery items does not damage the jewellery items and the substantially cylindrical wear means location is a separation means to hold and separate items of jewellery; and

a multi-stage securing means including separating and closing the first keeper body part including spaced apart arms and the second keeper body part, and a lock device with push release, to secure the jewellery keeper body first and second parts together in the closed state and maintaining the jewellery cage securely locked securely so that the jewellery items cannot be released from the jewellery cage of the keeper body by separation of the first and second parts of the keeper body, without operation of the push release of the lock device and opening of the jewellery cage parts,

wherein the one or more items of jewellery are positioned on the keeper body substantially cylindrical wear means location of the generally cylindrical second keeper body part within the jewellery cage keeper body in the open state, and the jewellery cage then closed by rotation, and the lock device of the securing means locks the jewellery in in cage in place, so the jewellery items are securely held on the keeper body until push release of the lock device and opening of the jewellery cage, and the jewellery items are held in an attractive presentation for wear by the person.

2. The jewellery keeper of claim 1, wherein the jewellery keeper is in the form of a nurse’s fob.

3. The jewellery keeper of claim 1 or 2, wherein the jewellery keeper is in the form of a pendent.

4. The jewellery keeper according to any one of claims 1 to 3, wherein the jewellery keeper has an attractive overall appearance and the jewellery keeper is configured to coordinate or extenuate the appearance of the items to be held.

5. The jewellery keeper according to any one of claims 1 to 4, wherein the jewellery keeper includes precious metals.

6. The jewellery keeper according to any one of claims 1 to 5, wherein the overall shape of the jewellery keeper, when viewed from the front is a teardrop shape.

7. The jewellery keeper according to any one of claims 1 to 6, wherein the jewellery keeper includes ornamentation or decoration, engraving, or gemstones.

8. The jewellery keeper according to any one of claims 1 to 7, wherein the items are held in the upright and hanging orientation as a matter of choice of the user and the orientation can change the look or presentation of the jewellery in the jewellery keeper to give options to the user.

9. The jewellery keeper according to any one of claims 1 to 8, wherein the location includes a separation means to hold and separate more than one item of jewellery.

10. The jewellery keeper of claim 9, wherein the separation means presents the jewellery in an attractive manner.

11. The jewellery keeper according to any one of claims 1 to 10, wherein the separation means includes projections or hooks and each jewellery item is positioned or placed on a projection.

12. The jewellery keeper according to any one of claims 1 to 11, wherein the location holds multiple items of jewellery, in a secure placement.
