CLAIMS

1. An adult toy comprising:

a lubricant inlet port connectable to a lubricant source containing a lubricant to be delivered through the adult toy;

a main conduit configured to deliver said lubricant from the lubricant inlet port through a main lubricant delivery port to a user of the adult toy;

an auxiliary conduit configured to deliver said lubricant from the lubricant inlet port through an auxiliary lubricant delivery port distant from the main lubricant delivery port; and

a pumping mechanism for pumping the lubricant from the lubricant inlet port through each of the main conduit and auxiliary conduit.

2. The adult toy according to claim 1, wherein the lubricant inlet port is a double one-way valve.

3. The adult toy according to claim 1, wherein the pumping mechanism comprises a first peristaltic pump configured to pump the lubricant from said lubricant inlet port through the main conduit.

4. The adult toy according to claim 3, wherein the pumping mechanism comprises a second peristaltic pump configured to pump the lubricant from said lubricant inlet port through the auxiliary conduit.

5. The adult toy according to claim 1, wherein the main lubricant delivery port is associated with a main head port of the adult toy, the main head port being configured for attaching thereto a main head insertable into a vagina of a user of the adult toy, said main lubricant delivery port being configured to deliver said lubricant through the main head inside the vagina.

6. The adult toy according to claim 1, wherein the auxiliary lubricant delivery port is associated with an auxiliary head port of the adult toy, the auxiliary head port being configured for

removably attaching thereto one or more auxiliary heads, each auxiliary head being configured to perform one or more operations associated with a clitoris of a user of the adult toy.

7. The adult toy according to claim 6, wherein the auxiliary lubricant delivery port is configured for attaching thereto a lubricant port extension element of the corresponding auxiliary head for delivering therethrough the lubricant to the clitoris.

8. The adult toy according to claim 1, further comprising a controller configured for controlling the pumping mechanism.

9. The adult toy according to claim 4, further comprising a controller configured for controlling the pumping mechanism, wherein the controller is configured to operate the first and the second peristaltic pumps in coordination with each other.

10. The adult toy according to claim 4, further comprising a controller configured for controlling the pumping mechanism, wherein the controller is configured to operate the first and the second peristaltic pumps independently of each other.
