

ABSTRACT**MULTISTORY PARKING SYSTEM**

To ensure that a car safely travels on an entrance/exit passage defined corresponding to a building, a turning/tilting means (63) for turning and tilting a car in a desired direction is provided so as to optionally control the direction of the car in an entrance/exit section. Also, car body detecting devices (64,65) are provided in combination with a car starting direction control device (66) which stops the turning/tilting means on the basis of a detection signal.
