(54) Title: WIRELESS MODEM AND METHOD THEREFOR FOR ROUTING DATA TO AN APPLICATION OR TO STORAGE

(57) Abstract

An application registry (226) is programmed (504) into a wireless modem (124) and includes routing information for routing data, based upon data type, to an application (244) or to storage (238, 236). Thereafter, the wireless modem receives (602) the data and determines (604) the data type. The wireless modem then routes (614, 628, 624, 618) the data in accordance with the routing information for the data type and, when the routing information indicates the application is located in an external device, further in accordance with an accessibility status of the external device.
