MEDIA CONSOLE FOR A SPLIT SYSTEM PERSONAL COMPUTER

ABSTRACT

THIS SHEET HAS BEEN REPLACED

A media console (16) of a personal computer system that includes a drive housing (30) that can be moved within a base member (32) between an open position and a closed position. A direct access storage device (e.g., floppy disk drive) (22,24) is disposed within the drive housing (30) and has an opening for receiving a removable storage medium. The open position is characterized in that the opening in the direct access storage device (22,24) is accessible to a user while the closed position is characterized in that the opening in the direct access storage device is not accessible to the user.
