(54) Title: SYSTEM AND METHOD FOR THREE-DIMENSIONAL CONTROL OF NOISE EMISSION IN INTERACTIVE SPACE

FIG. 3

(57) Abstract: Aspects of the disclosure relate to methods, apparatus, and systems for controlling an emission of an audio track in a three-dimensional (3D) space. An audio system is configured to detect an emission of a first audio track via one or more speakers of a plurality of speakers, wherein the first audio track is associated with an attraction, and select a speaker of the plurality of speakers. The audio system is further configured to determine whether the selected speaker is within a predetermined distance from the attraction, determine whether the selected speaker is emitting a second audio track different from the first audio track if the selected speaker is within the predetermined distance from the attraction, and control the emission of the first audio track via the selected speaker if the selected speaker is not emitting the second audio track.
