## CLAIMS

1. A support for a medicament, in particular in a unitary dose, comprising a support member (2) which is provided with at least one opening (4) and a blister type containment element (8) which is capable of containing a medicament, the blister type containment element (8) being able to be associated with the support member (2) in the region of the opening (4), the support (2) further comprising at least one adhesive sheet (5, 5’) which has at least one adhesive face (5a, 5a’) and which is provided with an opening (6, 6’) capable of at least partially being superimposed on the opening (4) of the support member (2), and a diaphragm layer of uniform thickness (11, 11’) which is associated with the adhesive face (5a, 5a’) of the adhesive sheet (5, 5’).

2. A support for a medicament according to claim 1, wherein the diaphragm layer (11, 11’) is of a material which is lighter, thinner or less resistant than the material of the support member (2).

3. A support for a medicament according to any one of the preceding claims, wherein the adhesive sheet (5) has two adhesive faces (5a, 5b) and is interposed between the support member (2) and the diaphragm layer (11, 11’).

4. A support for a medicament according to any one of the preceding claims, wherein the blister type containment element (8) has an edge (9) which is capable of being fixed to the support member (2) by means of the adhesive sheet (5, 5’).

5. A support for a medicament according to any one of the preceding claims, wherein the blister type containment element (8) is capable of being inserted into the opening (4) of the support member (2), the edge (9) being interposed between the support member (2) and the adhesive sheet (5, 5’).

6. A support for a medicament according to any one of the preceding claims, wherein the blister type containment element (8) is capable of being fixed to the support member (2) by means of an adhesive sheet (12), preferably provided with an opening (13).

7. A support for a medicament according to claim 6, wherein the blister type containment element (8) is capable of being arranged on a face of the support member (2, 2’’) in the region of the opening (4) or impression (4’’) of the support member (2, 2’’), the edge (9) being interposed between the support member (2, 2’’) and the adhesive sheet (12).

8. A support for a medicament according to any one of the preceding claims, wherein informative indications concerning the medicament are printed on the adhesive sheet (5, 5’, 12).
