

A FACILITATING ARRANGEMENT IN A COMMUNICATION SYSTEM

A method for determining the availability of at least one target user for a specific type of communication is described. The method comprises: retrieving contact information of at least one target user from a memory of a requesting user terminal; sending a request for communication status information of the at least one target user to a status network element, the status network element being arranged to provide the communication status information regarding the availability of the target user for the specific type of communication, wherein the request comprises at least a portion of the contact information of the at least one target user and identifies the specific type of communication; receiving, as a response to the request, a response message from the status network element, wherein the response message comprises the communication status information of the at least one target user; and modifying at least a portion of stored contact information when the received status information indicates that the target user is available for communication via the specific communication type, such that the modified contact information indicates on the requesting user terminal the current availability of the at least one user for communication via the specific communication type.
