WRIST STABILISER

ABSTRACT

The invention is an apparatus for stabilising a forearm, wrist, hand and fingers in a Z-positive intrinsic position including a support means for supporting the forearm, wrist, hand and fingers and a securing means. The support means includes a forearm segment for supporting the forearm, a hand segment for supporting the back of the palm and a fingers segment for supporting the fingers. The securing means secure said fingers to the support means to maintain a constant wrist tension.
