(54) Title: INFORMATION PROCESSING SYSTEM, INFORMATION PROCESSING METHOD, AND COMPUTER PROGRAM PRODUCT

FIG. 4

(57) Abstract: An information processing system includes: a storage device configured to store a three-dimensional (3D) information group including a plurality of 3D information items; an acquisition unit configured to acquire the 3D information group from the storage device; a display control unit configured to display, on a display, the plurality of 3D information items according to a priority that is predetermined; and a reception unit configured to receive attribute information of a user. The display control unit causes the plurality of 3D information items to be displayed according to a first priority in a case where the reception unit receives first attribute information, and causes the plurality of 3D information items to be displayed according to a second priority different from the first priority in a case where the reception unit receives second attribute information different from the first attribute information.
