(54) Title: CARGO PALLET HAVING TWO DECKS JOINED BY PROJECTIONS ON THE SURFACES

(57) Abstract: A cargo pallet comprising a planar top deck and a planar bottom deck, each with an upper surface and an opposing lower surface. The top deck and bottom deck have a plurality of hollow projections integrally formed therewith and extending therefrom. For the top deck, each of said hollow projections has its one end opening to the upper surface and its other end as a closed mating surface and for the bottom deck, each of said hollow projections having its one end opening to the lower surface and its other end as a closed mating surface. The top deck and bottom deck are arranged with the upper surface of the bottom deck being parallel to and facing the lower surface of the top deck such that the positioning of each of the hollow projections of the bottom deck correspond to those of the top deck; and the mating surfaces of the hollow projections of the top deck mate with, and are securable to, the mating surfaces of the hollow projections of the bottom deck.
