ABSTRACT

SYSTEM AND METHOD FOR DETECTING BROADBAND SERVICE AND A CHARGING MECHANISM FOR SAME

There is provided a system and method for detecting and charging broadband service provided to a computer device, the computer device configured to detect the type of broadband connection available and the computer device is capable of caching and synchronizing Internet content viewed by a user of the computer device wherein upon detecting that the broadband connection is a prepaid broadband connection, the computer device prompts the user of the computer device that any Internet content accessed will be chargeable; and upon detecting that the broadband connection is regular broadband connection, the computer device caches any Internet content viewed by the user and for synchronization with other computer devices in the system.
