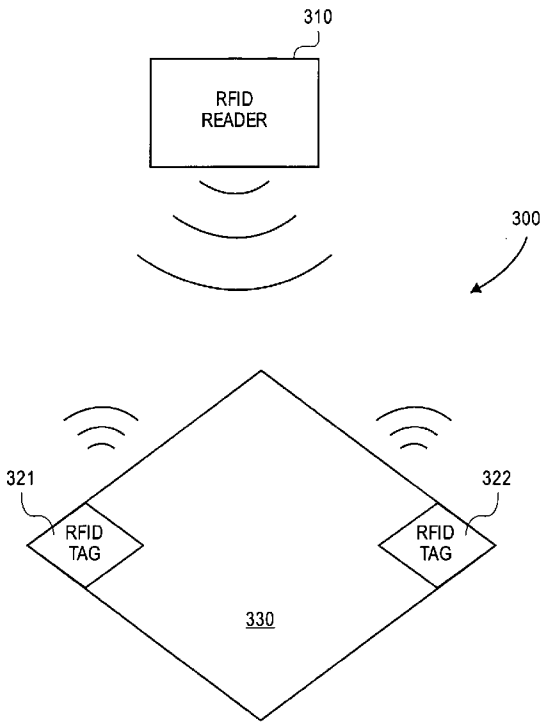
(54) Title: DETECTING MOVEMENT OF RFID TAGGED OBJECTS VIA MULTIPLE TAGS/READERS



(57) Abstract: Various embodiments of the invention may use changes in the quantity of responses received from an RFID-tagged object (330) to derive parameters that indicate probable movement of the object. In some embodiments, multiple RFID tags (321, 322) and/or multiple RFID readers (310) may be used in conjunction with one another to further refine the probability of movement and/or to indicate the probability of a particular type of movement.
