

FURNITURE WITH TOP BOARD

ABSTRACT

5 Provided is new furniture with a top board with effectively improved heightwise positioning accuracy for attaching a beam even if an unprocessed beam is attached to a support structure.

A support structure A is configured by connecting a plurality of legs 1, 2 or support bodies with a beam 3, including: a first bracket 71 which has a downward opening concave portion 71c and is rigidly connected to the legs 1, 2 upon supporting a top board 4 by the support structure A; and a fixing tool 74 which is detachably attached to the first bracket 71. The beam 3 is set to a lower portion of the concave portion 71c of the first bracket 71, the fixing tool 74 is set from a facing position of the first bracket 71 to a lower portion of the beam 3, and these first bracket 71 and the fixing tool 74 are connected with the beam 15 3 being sandwiched therebetween.
