

ABSTRACT

CLOSING CONFIRMATION DEVICE FOR ELEVATOR

5 A closing confirmation device includes a first switching member 3 that
opens and closes a first junction part 20 of a circuit unit 2, and a second
switching member 4 that opens and closes a second junction part 21 of the
circuit unit 2, so that the first junction part 20 and the second junction part 21
are respectively switched into conductive state and non-conductive state in
10 association with opening and closing of a door 61 of an elevator 6.
