A SURFACE EXTENSION DEVICE

ABSTRACT

The invention provides for an surface extension device, adaptable to be positioned onto the spine of a blade, said device including a first base, the first base having a flat surface including v-shape sides leads to a longitude grip, the v-shape sides having a oblique longitude edge at the bottom tip. The first base can extend in length by attaching a second base, the second base including at least an arm with a knob. The first base having at least an aperture and provides a secure means with the knob on the second base.
