CLAIMS

1. A cleaning device comprising:

   a rod member having at least one end comprising a loop; and

   a swab member comprising a first end attached to the loop and a second end comprising a tail having two or more separate members.

2. The cleaning device of claim 1 wherein the rod member comprises a polymer.
3. The cleaning device of claim 2 wherein the polymer comprises an organic polymer thermoplastic.
4. The cleaning device of claim 3 wherein the organic polymer thermoplastic comprises polyether ether ketone.
5. The cleaning device of claim 1 wherein the swab member comprises at least one of a foam material and a microfiber material.
6. The cleaning device of claim 1 wherein the rod has a first end and a second end wherein the first end comprises a straight end and the second end comprises looped end.
7. The cleaning device of claim 6 wherein the rod comprises a polymer.
8. The cleaning device of claim 6 wherein the looped end has a smaller diameter than the straight end.
9. The cleaning device of claim 6 wherein the looped end is longer in length than the straight end.
10. The cleaning device of claim 9 wherein the swab member is shorter in length than the looped end.
11. The cleaning device of claim 6 wherein the looped end is equal in length to the straight end or less in length than the straight end.
12. The cleaning device of claim 11 wherein the swab member is longer in length than the looped end.
13. The cleaning device of claim 1 wherein the swab member comprises one or more materials that are braided in relation to one another.

14. The cleaning device of claim 1 wherein the swab member comprises one or more materials that are twisted in relation to one another.
15. A cleaning device comprising:

    a rod member having a first straight end and a second looped end; and

    a swab member attached to the second looped end of the rod member by having a portion of the second looped end of the rod member traversing through an end of the swab member such that the swab member is capable of being rotated about and through the second looped end of the rod member.
16. The cleaning device of claim 15 wherein the rod member comprises a polymer.
17. The cleaning device of claim 15 wherein the first straight end of the rod member has a larger diameter than the second looped end of the rod member.
18. The cleaning device of claim 15 wherein the outer circumference of the first straight end is larger than the outer circumference of the second looped end.
19. The cleaning device of claim 15 wherein the first straight end comprises two thicknesses of the second looped end wherein the two thicknesses that comprise the straight end are fused together or co-extruded.
20. The cleaning device of claim 15 wherein the swab member comprises at least one of a foam material and a microfiber material.
