IMAGE DATA DISTRIBUTION METHOD AND APPARATUS, AND TERMINAL AND MEDIUM

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This disclosure is based on and claims the priority to the Chinese patent application No. 202110424483.8 filed on April 20, 2021, the disclosure of which is hereby incorporated in its entirety into the present disclosure.

TECHNICAL FIELD

[0002] This invention relates to the field of computer technologies, and in particular, to an image data distribution method and apparatus, a terminal and a storage medium.

BACKGROUND

[0003] The number of cameras of intelligent hardware (including an intelligent entrance guard, an intelligent sound box, etc.) can be one or more. The initiation of a traditional camera function must have a Surface carrier for preview, and one camera can only support one background application at one same time.
