(54) Title: CLEANING SHEET, CONVEYING MEMBER USING THE SAME, AND SUBSTRATE PROCESSING EQUIPMENT CLEANING METHOD USING THEM

(57) Abstract: A cleaning sheet has a cleaning layer having a surface resistivity not less than $1X10_{13}$ Ω/□ In a method of manufacturing a conveying member with a cleaning function, for sticking the cleaning sheet, in which the cleaning layer formed of an adhesive that is polymerized/cured by an active energy is provided onto one surface of a base material and an ordinary adhesive layer is provided onto the other surface thereof, onto the conveying member via an ordinary adhesive layer to have a shape larger than the shape of the conveying member and then cutting the cleaning sheet along shape of the conveying member, wherein a polymerizing/curing reaction of the cleaning layer is carried out after the cleaning sheet is cut out into the shape of the conveying member
