ABSTRACT

IMMUNOGLOBULINS BINDING HUMAN Vγ9Vδ2 T CELL RECEPTORS

The invention is in the field of medicine and relates to immunology, and relates in particular to human Vγ9Vδ2 T cell receptor bindingimmunoglobulin molecules. Human Vγ9Vδ2 T cell receptor binding immunoglobulin molecules are in particular for use in medical treatment and/or useful in assays with human Vγ9Vδ2 T cells, wherein human Vγ9Vδ2 T cells may be modulated.
