ABSTRACT

FORMULATION, COMPOSITION OR FOODSTUFF ADDITIVES FOR THE MODIFICATION OF GLYCEMIC RESPONSE METHODS OF MANUFACTURING AND USING THE SAME

The present disclosure relates generally to formulations, compositions or foodstuff additives for use in modulating a glycemic response for treating or preventing diabetes or obesity and processes and method of its manufacture. Described is a formulation, a composition or a foodstuff for modulating a glycemic response manufactured from at least one phenylpropanoid encapsulated in a first cyclodextrin; and a second cyclodextrin.
