# ABSTRACT

A physical/network/cloud-based system and method for electronic business/name card design, management, storage and exchange by means of mobile devices and computer systems, named ZappCards.

ZappCards facilitates design, management, storage and exchange of business/name cards. This is achieved through a software that allows users to input, store, share, exchange, and perpetually update contact information in an electronic business/name card, designs of which are available in templates.
