PRESSURE-SENSITIVE ADHESIVE COMPOSITION, SURFACE PROTECTIVE FILM, AND MOTHER GLASS SURFACE PROTECTIVE FILM FOR FLAT PANEL DISPLAY

ABSTRACT

Disclosed is an adhesive composition with which a surface protective film can be easily bonded to a glass surface. By using the adhesive composition, residues resulting from the surface protective film (specifically, from an adhesive layer thereof) can be easily cleaned/removed after removal of the surface protective film. An adhesive layer and a mother glass surface protective film for flat display panels, which uses the adhesive composition or the adhesive layer, are also disclosed. The adhesive composition is characterized by containing 0.01-2 parts by weight of an alkylene oxide group-containing compound per 100 parts by weight of a thermoplastic resin.
