ABSTRACT

METHOD OF STABILIZING A POLYSILOXANE EMULSION AND COMPOSITIONS CONTAINING STABILIZED EMULSIONS

A method of stabilizing an emulsion containing a polysiloxane and one or more surfactants comprising adding an effective amount of dispersion containing a DADMAC/acrylamide copolymer and one or more sulfate salts into said emulsion is disclosed. An emulsion/cosmetically acceptable emulsion comprising a polysiloxane, at least one surfactant, and a dispersion containing DADMAC/acrylamide copolymer and one or more sulfate salts is also disclosed.
