A THERMOCHROMIC CAP

Abstract

A cap is described according to exemplary embodiments of the invention. The cap has a body with thermochromic portions. The cap further has a cover structure positionable over an opening of a container and an engagement structure for coupling the cover structure to the container. The container is for containing fluids and the thermochromic portions change to or from an activation colour in response to temperature of the at least one portion being at least at the activation temperature.
