What is claimed is:

1. A coated article comprising:
   (a) substrate and
   (b) a coating deposited on at least a portion of the substrate from the composition comprising a resinous binder and from 10 to 30 percent by weight based on resin solids weight of a polysilicone resin.

2. The coated article of claim 1 in which the substrate is a container.

3. The coated article of claim 2 in which the container is a food or beverage container.

4. The coated article of claim 3 in which the coating is on the interior surface of the container.

What is claimed is:

1. A coated article comprising:

(a) a food or beverage container comprising a metal can, and

(b) a coating deposited on the interior portion of the food or beverage container from a composition comprising:

(i) a resinous binder comprising:

(A) a polymer containing reactive functional groups, and

(B) a curing agent that has groups that are reactive with the functional groups of the polymer, and

(ii) a polysilicone resin.

2. The coated article of claim 1 in which the polymer is an acrylic polymer.

3. The coated article of claim 1 in which the curing agent comprises an aminoplast or a phenolplast.

4. The coated article of claim 1 in which the polysilicone resin contains functional groups that are reactive with the functional groups of the curing agent.

5. The coated article of claim 1 in which the polysilicone resin is an alkyl-phenyl silsesquioxane resin.

6. The coated article of claim 1 in which the polysilicone resin has a hydroxyl content of 3 to 20 percent by weight based on total weight of the polysilicone resin.

7. The coated article of claim 1 in which the coating composition is dispersed in aqueous medium.
