Abstract

Provided are a method and apparatus for displaying a playback interface, and a device and a readable storage medium thereof, which relate to the field of multimedia data processing. The method includes: displaying an audio playback interface, wherein the audio playback interface includes a two-dimensional cover image corresponding to a target audio; and displaying an animation in which a two-dimensional optical disc element corresponding to the target audio slides out from an edge of the two-dimensional cover image in a first designated direction in response to the target audio switching to a playback state.
