Abstract

CUTTING MACHINE AND METHOD OF CUTTING

A machine to be used in the cutting of a blank into individual items is disclosed. The machine has a wire feeder and a wire receiver, the wire feeder and the wire receiver being generally parallel and spaced apart. The wire feeder is for supplying a plurality of parallel cutting wires to a cutting station and the wire receiver is for receiving the plurality of cutting wires from the cutting station. The cutting station has at least one tank for receiving therein a solution such that the cutting of the blank takes place in the solution.
