CONTAINER REFRIGERATION DEVICE

ABSTRACT

A container refrigeration device (10) includes: a fan controller (104) which reduces a rotation speed of an inside fan (36) when a temperature inside a container is stabilized; and a rotation speed controller (102) which reduces an operational rotation speed N of a compressor (30) such that the temperature inside the container becomes equal to a target temperature as the fan controller (104) reduces the rotation speed of the inside fan (36).
