

ABSTRACT

To provide a release film having good wettability for a slurry and a resin solution for sheet and a moderate sheet peeling force even when a sheet is further thinned. A release film having a release layer on at least one surface of a polyester film, wherein the release layer is a layer formed by curing a composition for forming a release layer, the composition for forming a release layer comprises an acrylic resin having a hydroxyl value of 150 mgKOH/g or more and 450 mgKOH/g or less, the acrylic resin is a resin prepared by copolymerizing at least two types of acrylic monomer components selected from the group consisting of: an acrylic monomer having a hydroxyl group as a first acrylic monomer, an acrylic monomer having a carboxyl group as a second acrylic monomer, an acrylic monomer having a long chain alkyl group as a third acrylic monomer, or a radically polymerizable acrylic monomer other than the foregoing acrylic monomers as a fourth acrylic monomer.
