(54) Title: RESOURCE INDICATION

FIG. 2

(57) Abstract: Example embodiments of the present disclosure relate to resource indication. In an example method, a terminal device receives a first indication of first one or more resources for transmission. The first indication comprises at least three of first time domain information, first frequency domain information, first spatial domain information, or first power domain information of the first one or more resources. In this way, unified spectrum utilization can be designed for full duplex, SBFD, TDD and FDD via beam-specific transmission direction indication.
