CHARGING METHOD, MOBILE DEVICE, CHARGING DEVICE, AND CHARGING SYSTEM

ABSTRACT

Embodiments of the present invention relate to a charging method, a mobile device, and a charging device. The mobile device includes a battery and a connector, where the connector includes a charging pin and a ground pin; and when the charging pin establishes a connection to an output pin of the charging device by using a charging cable or a battery charging stand, the charging pin receives a first current signal transmitted by the output pin of the charging device, and transmits the first current signal to an anode pin of the battery, so as to charge the battery.
