

Abstract

Provided are a sparkling beverage having excellent foam properties and a method for the same. A sparkling beverage according to one embodiment of the present invention has a ratio of a nitrogen content (ppm) to an extract (w/v%) of less than 28.0. A method of improving foam properties of a sparkling beverage according to one embodiment of the present invention includes adjusting a ratio of a nitrogen content (ppm) to an extract (w/v%) of a sparkling beverage to less than 28.0, to thereby improve foam properties of the sparkling beverage.
