ABSTRACT

SYSTEM AND METHOD FOR TRANSMITTING PARTOGRAPH INFORMATION AND ANALYSING THE SAME

There is provided a system of transmitting partograph information and analysing the same comprising a client device adapted to receive partograph information as inputs; the inputs transmittable to a partograph processing server via a wireless communication network; wherein the partograph processing server is configured to receive the partograph information; conform the partograph information to a standardized format and disseminate the partograph information to at least one computer device.

Preferably, the partograph processing server further comprises an analyser to analyse the partograph information for one or more abnormality condition and provides an alert to the at least one computer device and the client device.

Alternatively, the analyser is installed in the client device in the form of a software application.
