ABSTRACT

The embodiments of the disclosure relate to a method, an apparatus, a device, and a storage medium for creating a virtual object. The method includes: receiving a request for creating a virtual object associated with a target user (S310); presenting a configuration interface displaying set information of the virtual object, the set information being generated based on reference information associated with the target user, and the set information being associated with at least a dialogue capability of the virtual object (S320); and creating the virtual object associated with the target user based on an editing operation received via the configuration interface (S330).
