Abstract

This is a scaled mathematical stamp blocks and pad used for drawing models in primary school mathematics. Drawing models will help the primary school kids to understand the problem sums diagrammatically. However, parents and teachers' are having difficulties asking the students to draw models because the students think it is troublesome to draw using a ruler and/or stencil. With these stamp blocks and pad, they can ink their chosen, scaled-to-size fractional portions stamp block on the stamp pad and press the stamp block on their papers to have a model produced. Drawing number 2 shows the storage box when it is opened, with the stamp blocks in its sequence and position as shown and stamp pad standing vertically upright on the left side.
