Abstract

Children’s formula milk containing added human milk oligosaccharides, and a preparation method therefor. Raw materials of the children’s formula milk include cow’s milk, phospholipids, compound nutrients, whey protein powder, prebiotics, and/or condensed milk; and the prebiotics comprise human milk oligosaccharides, galacto-oligosaccharides, and fructo-oligosaccharides. The children’s formula milk provides main nutritional requirements for children, and also has the effects of enhancing immunity and regulating gut microbiota.
