CHAIR MASSAGER

ABSTRACT

There is provided a chair massager which, while affording constructional simplicity, achieves both the placement of user’s legs on a footrest section and massage for the legs.

The chair massager (1) comprises a seat section (2) on which a user sits, and a footrest section (5), which is placed forward of the seat section (2), having a built-in leg massage mechanism for massaging legs (L) of a user sitting on the seat section (2), and further includes a cover body (20) disposed at the front face of the footrest section (5).
