ABSTRACT

A wearable device to magnify a notification element

[045] The wearable device includes a case having at least one display disc to display at least one of a notification element; and a magnifying module operationally coupled to the at least one display disc. The magnifying module includes a magnifier coupled to the at least one display disc to visualize a view of the notification element to a user. The magnifying module also includes a micro motor coupled to either the at least one display disc, the magnifier or a combination thereof to control a position of the at least one display disc or the magnifier; and at least one actuator to actuate the micro motor to move the at least one display disc to a preconfigured position with respect to an actuation.
