ABSTRACT

WRAP DEVICE FOR A BED ENSEMBLE

A fitted wrap device (10) is provided for covering sides (106 and 108) and ends (110 and 112) of the base unit (102) of an ensemble bed (100). The device is formed of a panel (12) of fabric with joined or adjustable joined ends (22 and 24). The panel provides an opening (17) for slipping over a mattress (104) on the base unit. A retaining arrangement (30) retains the device about the base unit, and adjustment elements (27 and 28) provided at end edges (22 and 24) of the panel.
