ABSTRACT

METHOD AND TOOLS FOR PROGRESSIVELY SCALING MATURITY OF INFORMATION TECHNOLOGY ORGANIZATIONS

A method of assessing and improving capability of information systems (IS) management in an organization using a computer system is provided. The method gathers responses related to strategic aspects of the IS management from a plurality of stakeholders in the organization, determines incongruence between the responses using the computer system, determines a change management efficiency for each of the strategic aspects based on the responses using the computer system, and provides an assessment of the capability based on the responses, the incongruence, and the change management efficiency.
