BLOWER DEVICE

[ABSTRACT]

A blower device (10) includes: a pair of ducts (20) that are elongated and arranged in parallel with each other; and a first blower (30) that is positioned between the pair of ducts (20) and blows air into each of the pair of ducts (20). Each of the pair of ducts (20) includes a vent (23) from which an airflow that flows in a first direction is blown out by the blowing of air, the vent (23) being elongated along a longitudinal direction of the duct (20).
