CLAIMS

1. A hair extension comprising:

a linearly extending base member;

a plurality of hair extension strands to be provided longitudinally along the base member, each of the plurality of hair extension strands including a knot part being a knot formed on the base member and a hair part extending from the knot part; and

a fixing part to be fixed to a portion of the hair part so as to be adjacent to the base member for connecting the plurality of the hair extension strands to the hair of a subject,

wherein the fixing part includes:

a ring member formed in a ring shape and provided so that third hairs being a portion of the hair part are arranged outside the ring member and fourth hairs being a remaining portion of the hair part are inserted inside the ring member, wherein a plurality of the ring members are to be provided longitudinally along the base member; and

a crimp ring provided so that the fourth hairs are inserted into and through the crimp ring, the crimp ring being crimped to be fixed to the fourth hairs below the ring member,

wherein before the ring member is crimped, the ring member is not fixed to the fourth hairs and can move between the base member and the crimp ring fixed to the fourth hairs.

2. A manufacturing method for a hair extension, the manufacturing method comprising:

a hair extension strand forming step of arranging a plurality of hair extension strands on a linearly extending base member and forming a plurality of knot parts to fix the plurality of hair extension strands to the base member; and

a fixing part fixing step of arranging, longitudinally along the base member, a fixing part for attaching the plurality of hair extension strands to the hair of a subject, and then fixing the fixing part to portions of a plurality of hair parts extending from the plurality of knot parts,

wherein the fixing part fixing step includes:

a ring member arranging step of arranging a plurality of hollow ring members on the plurality of hair extension strands longitudinally along the base member;

a hair part inserting step of arranging third hairs being a portion of each of the plurality of hair parts outside each of the plurality of ring members, and inserting fourth hairs being a remaining portion of each of the plurality of hair parts into and through each of the plurality of ring members; and

a ring member fixing step of fixing each of the plurality of ring members to the fourth hairs with a fixing member,

wherein in the ring member fixing step, after a crimp ring is arranged below each of the plurality of ring members and the fourth hairs are passed through the crimp ring, the crimp ring is crimped,

in the manufactured hair extension, before the ring member is crimped, the ring member is not fixed to the fourth hairs and can move between the base member and the crimp ring fixed to the fourth hairs.

3. An attaching method for a hair extension, the attaching method comprising:

a hair extension manufacturing step including

a hair extension strand forming step of arranging a plurality of hair extension strands on a linearly extending base member and forming a plurality of knot parts to fix the plurality of hair extension strands to the base member, and a fixing part fixing step of arranging, longitudinally along the base member, a fixing part for attaching the plurality of hair extension strands to the hair of a subject, and then fixing the fixing part to portions of a plurality of hair parts extending from the plurality of knot parts; and

a hair extension connecting step of connecting a hair extension manufactured in the hair extension manufacturing step to the hair of the subject using the fixing part,

wherein the fixing part fixing step includes:

a ring member arranging step of arranging a plurality of hollow ring members on the plurality of hair extension strands longitudinally along the base member;

a hair part inserting step of arranging third hairs being a portion of each of the plurality of hair parts outside each of the plurality of ring members and inserting fourth hairs being a remaining portion of each of the plurality of hair parts into and through each of the plurality of ring members; and

a ring member fixing step of fixing each of the plurality of ring members to the fourth hairs by a fixing member, and

wherein in the hair extension connecting step, before the ring member is crimped, the ring member is not fixed to the fourth hairs and can move between the base member and the crimp ring fixed to the fourth hairs, and the hair of the subject is passed

through each of the plurality of ring members and each of the plurality of ring members are crimped to fix the hair of the subject to each of the plurality of ring members.

4. The attaching method for a hair extension according to claim 3, the attaching method comprising:

a crimp ring removing step of opening and removing the crimp ring after the hair extension connecting step.
