DISPOSABLE WIPING SHEET

The invention aims to provide a disposable wiping sheet used with a mop-type cleaner device so as to capture dust and dirt efficiently no matter how the dust and dirt are fine or bulky.

A disposable wiping sheet 1 used with a mop-type cleaner device 2 has a bottom surface 21 and a top surface 22 extending in parallel to each other and shaped in a rectangle as viewed in its plan view. The bottom surface 21 is flat but the top surface 22 is relatively low in a pair of side regions 16, 17 extending in parallel to each other with a predetermined width and relatively high in a middle region 18 lying between these side regions 16, 17.

Refer to Fig. 1.
